B166, T166 and B177 Bypass Valves

B166 (3/4", 1") Automatic Dual-Purpose, Bypass Valve

Typical Application: Cylinder filling pumps as well as aerosol propellant feed pumps.

A combination bypass and priming valve specifically designed for small cylinder-filling-type pumps, especially of the regenerative turbine type, such as the Corken Coro-Flo® pump series with flows up to 40 gpm (9.1 m³/hr). The patented vapor elimination system keeps liquefied gas pumps primed to increase system reliability and decrease pump and seal wear. The B166 is a smooth operating bypass with moderate pressure buildup.

T166 (1-1/4", 1-1/2") Pump Flow Control Valve

Typical Application: Large-capacity pumps filling variable size tanks and bottles such as those used with delivery trucks or multiple cylinder filling plants.

A high-pressure build-up valve for smooth acting flow control. Specifically designed for bypass protection for pumps in the 30 to 100 gpm (6.8 to 22.7 m³/hr) range, such as those used on delivery trucks. In contrast to the B177, the T166 valve opens gradually as pressure builds up to modulate the flow, bypassing the excess capacity smoothly and silently back to the supply tank. A continuous internal bleed in this valve assists in eliminating vapors.

B177 (1-1/4", 1-1/2", 2", 2-1/2") Differential Bypass Valve

Typical Application: In liquefied-gas bulk-plant installations for loading and unloading pumps.

A low-pressure build-up bypass valve specifically designed for applications requiring protection for positive displacement pumps in the 40 to 350 gpm (9.1 to 79.5 m³/hr) range. It can also be used as a differential back-pressure valve to assure adequate pressure on meters, etc. To function properly, this valve requires a pressure sensing line from the storage tank.

Typical Installation

Bypass Valve Operation

B166 with Priming Function

ZV200 Bypass Valve

ZV200 Bypass Valve

Typical Applications: Used for both truck and stationary applications for loading and unloading.

A low-pressure build-up bypass valve designed for applications requiring protection for positive displacement pumps. Specifically designed for protecting pumps with capacities up to 250 gpm (56.8 m³/hr). The continuous internal bleed will assist in the operation of systems with “air” or “electric” operated internal valves.

Operating Specifications

Maximum differential pressure:	150 psid (10.34 bar)
Operating temperature range:	Up to 225°F (107°C) ¹
Maximum working pressure:	400 psi (27.6 bar)
Spring ranges:	91–125 psi (6.3–8.6 bar) standard 41–70 psi (2.8–4.8 bar) optional 71–90 psi (4.9–6.2 bar) optional 126–150 psi (9.0–10.3 bar) optional

¹Fitted with Buna-N O-rings.

Flo-Chek® Valves

The Corken Flo-Chek® valve enables you to detect flow in the gas or liquid lines and it prevents release of product from the storage tank in the event of a hose failure. Flow-indicating and back-check valves feature all ductile iron construction and are

available in 1-1/4" through 4" NPT or with welded flanges, which are rated to 400 psig (27.6 bar). Standard O-rings are Buna-N. Teflon®, Viton®, and Neoprene® are optional.¹

¹Teflon®, Viton®, and Neoprene® are registered trademarks of the DuPont company.

Specifications and Construction

Body	ASTM A536 ductile iron
Flapper	Carbon steel
Seat	Buna-N or Teflon® ^{1,3}
O-rings	Buna-N or Neoprene® ¹
Flanges ²	ASTM A536 ductile iron
Maximum working pressure	400 psi (28 bar)
Maximum working temperature	400°F (204°C)

¹Registered trademarks of the the DuPont company.

²Steel slip-on weld flanges are available at extra cost, 2" to 4" sizes only.

³Teflon® available at extra cost.

Pump Strainer and 4-Way Valves

Pump Strainer

A strainer on the suction side of a pump can prevent considerable damage from weld slag and debris. Strainers are most important upon starting up a new system. Be sure to check and clean the strainer periodically as a clogged strainer is a common source of suction problems. The right-angle design can mini-

mize pressure drop and comes complete with ductile iron body with Monel screen and steel plug. Available for liquid (1836-X1, 14 mesh) or vapor (1836-X, 40 mesh) service (1-1/4" NPT 400 psig [27.6 bar] rating).

Dimensions in inches (cm)

4-Way Valves

Product Features

- Non-lubricated
- Full port design
- Carbon steel construction
- Reinforced Teflon^{®1} seals and seats
- Flow direction indicator
- 500 psig (34.5 bar) working pressure

^a All information is for standard controls from manufacturers of our selection. Heaters are included.

^b Available with or without START-STOP push button.

^c Available with HOA which indicates HAND-OFF AUTOMATIC selector switch.

^d Wall mounted starter. Motor mounted starter 2277-X1 available at same price.

^e Two suffix letters need to be added to the part number on all magnetic starters to indicate:

Voltage, separate control	120	208	240	380	480	600	Operator	None	P-B(B)	HOA(C)
1st Suffix letter	D	H	A	N	B	C	2nd Suffix letter	0	I	3

^f Wall mounted starter. Motor mounted starter 2277-X3 available at same price.

Coro-Vac® Cylinder Purging System

Applications

Cylinder and tank air purging prior to LP gas filling is a time consuming, inefficient operation. Even with the newer O.P.D. valves, the Coro-Vac® is just as fast, and in most cases, faster than labor-intensive, multiple gas purging. The Corken Coro-Vac® system eliminates multiple gas purging. There is no vented gas, therefore no waste and no exposure to employees or the environment. Available in portable and explosion proof models, the Coro-Vac® is your purging solution.

Product Features

- Oil-less construction for clean, efficient operation
- Motor mounted for compact—lightweight design
- Available with open drip proof or explosion proof motors
- Muffler and inlet filter are standard
- Rugged construction for low maintenance

CPS1X Single Cylinder (explosion proof model)

Purge Time Estimates

# of Cylinders	Coro-Vac® Model	Est. Purge Time
1–3 (20 lb)	CPS1X	2–6 minutes

Outline Dimensions and Specifications

Dimensions are in inches (cm)

CPS1X

- Used on 1–3 cylinder applications
- Vacuum to 27.5 in/Hg maximum
- 115/230V, 60 Hz, single phase explosion proof motor

Compressor Liquid Traps

Mechanical and Automatic Traps

Corken liquid traps are recommended in all liquefied gas transfer applications or where climate or process conditions cause condensation of gasses in the suction pipeline. A gas compressor cannot tolerate even a few drops of liquid. Liquid slugging causes severe damage to the compressor and in some cases can destroy it completely. A variety of liquid traps are available depending upon your particular application. Corken's mechanical trap is useful when liquid is only present at start up. If the conditions are such that liquid will form in the suction line during operation, or the compressor is unattended, an automatic trap is recommended. Applications with large flow volume or where an operator is present can utilize our larger automatic trap with two liquid level switches that can be set up as an alarm and a shut down.

Mechanical Liquid Trap

Stops liquid from entering the compressor with a ball float actuated shut-off valve for positive closure. Equipped with a drain valve and a vent valve to break any vacuum formed between the compressor and trap.

Automatic Trap

Stainless steel liquid level switch will completely shut down the compressor. Equipped with a drain valve.

General

Working pressure—335 psig (23.1 bar)

Each tank hydrostatic tested to 500 psig (34.5 bar)

Outline Dimensions

Inches (cm)						
	Trap Part Number	Normal Compressor Type	A	B	C	D
Mechanical trap ball float actuated	1522-1X1	91, 291, 491	22-3/4 (57.8)	14-1/8 (35.8)	1-1/4	6-1/2 (16.5)

—	(19.5)	(164.4)	(143.5)	—	(12.0)	(28.4)	(14.6)	—	(31.1)

Specifications

1. ASME code tank—365 psig working pressure at 650°F
2. Two liquid level switches with three mounting positions. These switches allow for two different level-controlled functions such as an alarm circuit and a shut-down circuit.

Low Oil Pressure Switch and Crankcase Oil Heater

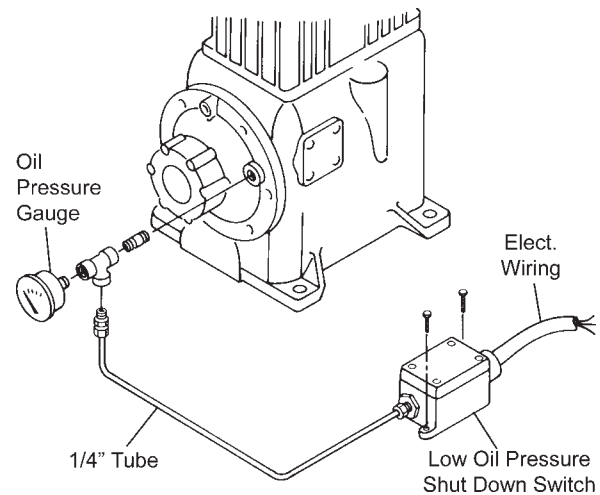

Specifications

The Corken low oil pressure shutdown switch is designed to protect the compressor from bearing and rod damage, seizing, etc., due to insufficient crankcase oil pressure. When the oil pressure drops to below 10 psi the switch shuts down the motor. Also included in the assembly is an approximately 30 second timer that will delay reaction from the switch, allowing the compressor to build oil pressure during start-up. This switch when combined with a control panel can also be used for loadless start, where the compressor runs with no load during start up to allow the motor to get out of windings before it must meet the load of the compressor.

Product Features

- UL Listed
- Single pole, double throw
- 1 amp at a rated voltage
- 10 amp inrush design
- Explosion proof
- Automatic operation
- Built in timer delay
- 120V or 230V models
- Compact size

Outline Dimensions in inches (cm) and Installation

Crankcase Oil Heater

Designed for cold climates, this compact oil heater can keep crankcase oil at the proper viscosity for optimum oil pump performance. The heater is explosion proof and watertight.

Ratings are; Class 1, Group C & D, Class 2, Group E, F, G, 120 VAC, 250 Watts, 20 Watts/square inch.

Keep oil at proper level to prevent possible damage from overheating.
Caution: To prevent electrical shock or ignition of hazardous atmospheres, disconnect the device from the supply circuit before opening. Keep assembly tightly closed when in operation.

Other Accessories

Pressure Gauges

316 Stainless steel glycerine filled pressure gauges will mount on the compressor head or in the piping system and come with the following features:

- Dual scale: psi and kg/cm²
- 0 to 400 psi (0 to 28 kg/cm²) range, 5 psi (1 kg/cm²) increment
- 2-1/2", 270° dial with 1/4" NPT center back connection

Strainers

The right-angle design will minimize pressure drop and comes complete with ductile iron body with Monel screen and steel plug. Available for liquid (1836-X1, 14 mesh) or vapor (1836-X, 40 mesh) service (1-1/4" NPT 400 psig [27.6 bar] rating).

Belt Guard Assemblies & Outline Dimensions in Inches (cm)

For belt guard with brackets and bolts, add X to the belt guard part #. For example; 3736-X.
For larger frame sizes or heavy duty drive, consult factory.

Compressor Mountings

Three standard mountings are offered for our LPG gas compressors. The 103 mounting is a basic baseplate and V-belt drive assembly. The 107 is designed to be a drop in package for liquid transfer and vapor recovery applications. This set up comes in multiple configurations to accommodate the different liquid trap options. All 107 mountings contain our strainer and 4-way valve either of which can also be purchased separately. In addition to

these, we have the 109 mounting, which is like a 103 with a liquid trap added. This package is best when liquid transfer is needed but vapor recovery is not required, such as in a process plant. Custom packages are also available by contacting our Applications Engineers for a quotation. See the LPG Compressor Sales Catalog for outline dimensions of these mountings with the various sizes of compressor.

Compressor Mountings

-107A Mounting shown

Standard 107 Items

- All 103 items plus
- 40 mesh strainer
- Non-lube 4-way valve
- Interconnecting piping
- Liquid trap as specified below

107 Mounting

- Mechanical liquid trap with ball float

107A Mounting

- Automatic liquid trap with one NEMA 7 liquid level switch

107B Mounting

- Automatic liquid trap with two NEMA 7 liquid level switches

107F Mounting

- 107A or 107B with 300# ANSI flanged components and connections
